

```
USE ROLE ACCOUNTADMIN;  
USE WAREHOUSE COMPUTE_WH;  
USE DATABASE SNOWFLAKE_FUNDAMENTALS;  
USE SCHEMA DAY2;
```

```
/*=====UDF Overloading=====
```

Snowflake supports overloading of SQL UDF names. Multiple SQL UDFs in the same schema can have the same name, as long as their argument signatures differ, either by the number of arguments or the argument types. When an overloaded UDF is called, Snowflake checks the arguments and calls the correct function.

```
=====*/
```

```
create or replace function add5 (n number)  
  returns number  
  as 'n + 5';
```

```
create or replace function add5 (s string)  
  returns string  
  as 's || "5"';
```

```
--Passed a number , so snowflake calls the first UDF  
select add5(1);
```

```
--Passed a string , so snowflake calls the second UDF  
select add5('A');
```
